

G9 Offshore Wind Health and Safety Association

Demonstrating Health & Safety Leadership

Stakeholder Forum 22 October 2013

Paul Smith
MD Generation, SSE
Chairman, G9 Board

Welcome

- Introduction
- Housekeeping
- Outline and purpose of the day
- Why are we here today?

www.g9offshorewind.com

- Safety Moment (video)

www.g9offshorewind.com

Why the G9?

- It was recognised by a number of leading developers that the fledgling Offshore Wind Industry was a potential high risk area.
 - Firstly during construction
 - But right across the windfarm lifecycle
- There were inconsistencies and mixed standards
- Desire to get it right early on

www.g9offshorewind.com

The data doesn't lie!

- Analysis of our incident data highlights hotspots and inconsistencies
- There is a **clear need** to develop a **common set of standards** across the industry, covering:
 - Owners
 - Developers
 - Supply chain
 - Regulators

This is a journey

www.g9offshorewind.com

The G9

Vision

To create an offshore wind industry that is seen to **deliver world class health and safety performance** across all of its activities.

Objective

To use our position as major developers to **provide health and safety leadership** to the offshore wind industry by establishing a network of company leaders, safety & health professionals and other stakeholders to promote a **strong and sustainable health and safety culture**.

The "9" in G9?

Not precious or exclusive club

It is about making a start!

www.g9offshorewind.com

The challenges we face

- How we **implement standards** and guidelines across the industry, so they **are used**, is key
- This can only be done through **effective engagement** across the industry
- Implementation and engagement **will lead to change** in safety performance and behaviours
- We need **emotional** engagement to make it happen...

www.g9offshorewind.com

The purpose of today

- Present the G9 risk based work programme
- Report on activities and outcomes and the plan for the consultation process
- Identify where the G9 fits into the offshore wind industry “eco-system”
- Discuss the need for common standards and guidelines, how to implement these, and areas of future concern which need to be tackled.

We welcome your questions and feedback throughout the course of the day and participation in the panel session on key industry issues

But it is not about you or me...

- **We are not the people getting hurt**
- **So who are we doing it for?**
- **Safety Moment**
