

## **Safety alert:** Strained back while using tools

**Consequence:** Restricted work day injury

### **Description of incident**

- During service injured person (IP) was stretching bolts as part of service.
- During this operation he experienced pain in his lower back followed by soreness.
- He then laid down for a short time and went back to work performing light visual inspections for the rest of the day.
- IP explained to the Supervisor that he could not work at full capacity the day after and arranged for a meeting at the chiropractor the next day.

### **Learnings**

- All work related to stretching of bolts is should be highlighted by site management and subject for Toolbox talk.

### **Why did it happen?**

- Service team used the wrong tool according to the instruction.
- Lack of communication / understanding regarding the new tool and updated work instruction.
- Failure to perform Toolbox talk correctly to insure correct understanding of AWP and tools.
